

Requirements for Website:

- A listing of dogs and/or cats will be shown with pictures and basic information.
- Prospective owners must fill out an online questionnaire vetting them as a potential pet adopter. All questionnaires must be approved by PAO management prior the user being able to select a pet they'd like to adopt.
- The web app must have a way for the approved adopter to select a desired pet. If more than one person desires a pet, the web app should provide a way for the PAO management to select who may adopt the pet.
- The application should be protected by a login screen. But a user registration screen is optional.
- All user input should be validated before it is processed by the system so that hackers cannot manipulate the system.
